科研经历

Tencent Inc., Research Intern @ HY — Mar 2026 – Present

Mentor: Jiaxin Lin

- Spatial reward modeling and curriculum-guided RL for text-to-image generation: tool-grounded spatial verification with SpatialCritic and rollouts progressing from foundational skills to complex compositions (Getting Space Right, under review; joint work with UC Merced).

University of California, Merced — Apr 2026 – Present

Remote Visiting Student @ VLLab — *Mentor:* Ming-Hsuan Yang

- Remote collaboration on spatial reasoning and reward reliability for image generation, through the joint Getting Space Right project with Tencent HY.

Tencent Inc., Research Intern @ YouTu Lab — Jul 2025 – Mar 2026

Mentor: Jun Liu, Feng Zheng

- Analyzed why policy entropy can remain constant while perceptual diversity collapses in flow-based RLHF; developed perceptual-entropy regularization to improve the quality–diversity trade-off (PEC, NeurIPS'26 Spotlight).
- Investigated visual hallucinations caused by limited exploration and trajectory imitation; developed dynamic-granularity rollouts and consistent policy-gradient optimization (Consistent-RFT, under review).

Singapore Management University, Remote Visiting Student @ LV Lab — Jul 2024 – Mar 2025

Mentor: Pan Zhou

- Developed semi-online preference optimization that pairs online unpreferred motions with offline preferred examples, addressing offline overfitting and online sampling bias (SoPo, NeurIPS'25).
- Co-developed step-aware reward modeling and reward-guided sampling to improve text-motion alignment and motion realism during denoising (ReAlign, AAAI'26; co-first author).

Southeast University, Master's Student @ PALM Lab — Apr 2024 – Present

Mentor: Hongsong Wang

- Co-developed step-wise reward optimization and a unified reward model for heterogeneous motion representations (EasyTune, ICLR'26; MotionRFT, TPAMI'26; co-first author on both). On HumanML3D with MLD, EasyTune achieves FID 0.132 at 22.10 GB peak memory, using 15.22 GB less than DRaFT-50.
- Developed frequency-guided diffusion with perturbation training for skeleton-based video anomaly detection, improving robustness to unseen normal motion and emphasizing global-motion reconstruction (FG-Diff, TIP'26).

Shenzhen University, Undergraduate Research Assistant — Oct 2022 – Oct 2023

Mentor: Can Gao

- Developed multi-scale granular-ball and fuzzy-rough-set methods for detecting heterogeneous outliers (MGBOD, TKDE'25; first student author), and three-way decision-based multi-view co-detection (TWCOD, IJAR'23; first author).
